There is a real need to cut costs wherever possible, yet we cannot afford to forget about environmental issues. Streamlight rechargeable flashlights make good economic environmental sense. Over time they cost significantly less to operate; and they reduce the amount of batteries used, thereby relieving the problem of battery disposal. And, our NiCd batteries are recyclable.

With Streamlight rechargeable flashlights, your plant will not only save on the cost of batteries, you'll save the time that's wasted when you discover your light isn't working - and the steps involved in getting and replacing batteries.

More powerful and more economical, Streamlight rechargeables pack a lot more power, are more dependable and more cost-efficient than a "D" cell flashlight. Over the life of a Streamlight rechargeable, you'll save more than \$300 in disposable alkaline batteries.
